KAUSTUBH DUA

Electronics & Computer Engineering Student | Software Developer

JIIT Noida • kaustubhdua1991@gmail.com • github.com/kaustubhdua • linkedin.com/in/kaustubh-dua-2b5a76416

PROFESSIONAL SUMMARY

Electronics & Computer Engineering student at Jaypee Institute of Information Technology, Noida, building practical software across AI, data, systems, and product engineering. Interested in turning complex workflows into useful tools with clear system boundaries, careful validation, and thoughtful UX.

EDUCATION

B.Tech. / Undergraduate — Electronics & Computer Engineering (ECM)
Jaypee Institute of Information Technology (JIIT), Noida

TECHNICAL SKILLS

Languages & web: Python, JavaScript/TypeScript, HTML, CSS
Frameworks & tools: React, Next.js, FastAPI, Streamlit, Vite, esbuild
Data & systems: PostgreSQL, Supabase, REST APIs, local inference with Ollama
Engineering: Git/GitHub, automated testing, CI workflows, Playwright, CodeQL

SELECTED PROJECTS

GitGlobe | Three.js, WebGL, embeddings
Interactive 3D repository-discovery experience for exploring open-source projects by capability. github.com/kaustubhdua/GitGlobe

NIRDHOOM | React, Supabase, OR-Tools
Crop-residue coordination concept connecting field requests, service workflows, operational evidence, and buyer pathways. github.com/kaustubhdua/nihdhoom

Saathi | Next.js, FastAPI, voice UX
Voice-first, multilingual assistance platform designed around source-aware answers, consent-based workflows, and human escalation. github.com/kaustubhdua/Saathi

SATARK | Python, Streamlit, threat triage
AI-assisted security-awareness workspace for triaging suspicious messages, links, images, QR codes, PDFs, and supported videos. github.com/kaustubhdua/Satark

Adapt AI | FastAPI, Ollama, local inference
Local AI assistant that checks available hardware and recommends a suitable model for on-device workflows. github.com/kaustubhdua/adapt-ai

JIIT Youth Club Website | React, Vite, Playwright
Public-facing website for organisation information, clubs, events, history, gallery, and recruitment. github.com/kaustubhdua/JYC-Website

ENGINEERING APPROACH

Prioritise honest prototype/demo labels, test failure paths as well as happy paths, keep external providers behind clear interfaces, and verify claims against implementation evidence.
